- ✓ Team Working
- ✓ Greater productivity
- ✓ Reduction in internal costs due to semi-automated processing
- ✓ Reduction in processing errors due to smart data extraction
- ✓ Integrated with WinEUR FLOX (optional)
- ✓ Available with our Cloud solutions, including ConnectMe

General aspects

REQUIREMENTS

- WinEUR AP/PR and WinEUR ARCHIVE
- In AP/AR, the following fields have been added: IDE code, expenses account, analysis account, label and BVR reference number. The AP/AR log may be created/filled out from WinEUR IZI-CLIK from initial capture of an invoice.
- Invoices must be scanned in .tiff (the .tiff file will then be converted into PDF during the accounting process). PDF files are recognised but only partially optimised for OCR : they can be converted into .tiff by the programme.

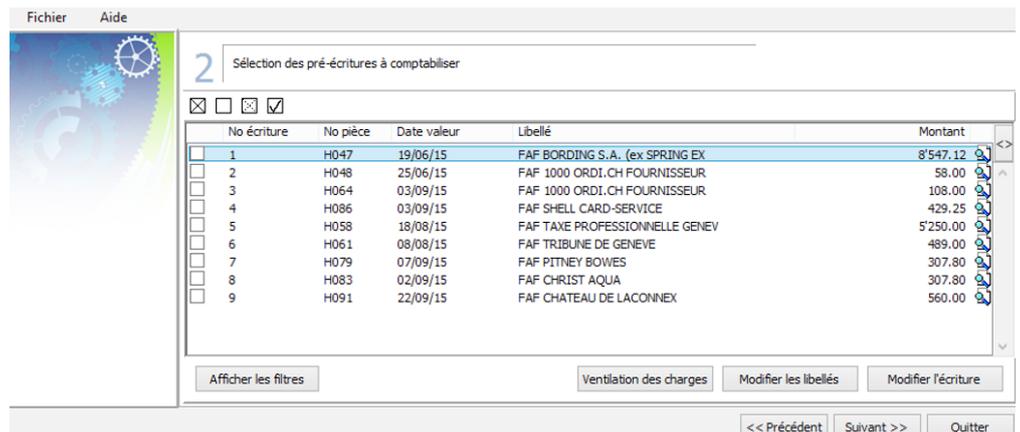

AUTOMATIC INVOICE RECOGNITION

- Multi language and multi currency software
- When importing, the content of each invoice undergoes smart analysis with WinEUR IZI-CLIK according to pre-established recognition rules.
- Data contained in the invoice and required for an accounting entry are: IDE number, name of the party, number and date of the invoice, amount before tax, including taxes and VAT, currency, BVR reference number.
- This step may be taken by a non-accounting person.
- Option of automatic pre-accounting of validated and recognised invoices.

AUTOMATIC ACCOUNTING OF INVOICES

- After verification, final validation by an accounting manager may then occur.
- Pre-booking journal: the accountant in charge may then amend/validate prior to the automatic transfer into the preliminary journal entries.
- Option to modify labels.
- Breakdown possible in multiple expense accounts and/or analytics.
- In as much as the required information has already been entered, these invoices will appear automatically as proposed payments.
